

Streaming application was stopped before generating the messages using its own application. Took around 9-10 minutes to clear off the lag (600 TPS) as evident from the below screenshots.

In general the credit card data producer produces data at around 250 TPS average which streamed through the system all the way to bigquery.

****Current Issue is with BQ connector since it's confluent managed, in basic quota can't increase the number of tasks hence the consumption rate of messages is slower.**
